4	Interpretation and Interview Guide	6

# Introduction

### Why Does Resilience Matter?

Most, if not all jobs entail a degree of pressure. However, people differ from one another in terms of how they will respond to this. Resilience has been identified as key factor in determining how people adapt and, while the sources of such challenges may differ across contexts, how someone interprets and responds to these is vital to ensure that individual and organisational performance is maintained.

Stressors can take on many forms for an employee. For example, some people may experience pressure when their workload increases, an unsettling change takes place, difficulties arise in life outside of work, or where they experience a setback in a task that they are completing. Resilience can help people to adapt and deal with these situations in a positive way.

For an employer, a resilient employee is one who can face difficult challenges and maintain high levels of performance. Whether the context involves a large number of small stressors or a single, notable stressor, selecting employees on the basis of their level of resilience, in conjunction with other criteria, can assist in identifying individuals who are likely to perform well even when faced with difficulties and challenges.

### This Report

The purpose of this report is to provide details of Ann Example's profile on The Resilience Questionnaire, and to provide guidance for a selection interview to verify this profile. The information gathered from this interview can be used to support selection decisions when The Resilience Questionnaire is used in conjunction with other selection tools. It is important to remember that this report is based on a Participant's self-reported responses to the questionnaire. As such, it may not exactly reflect how others view the Participant.

The Participant's responses to the questionnaire have been compared to those of a large group of other people who have already completed it. This allows you to consider the responses of the Participant in context and to understand how his or her levels of resilience compare to others.

This report is comprised of four sections:

**1. The Eight Components of Resilience** - This section details the eight components measured by the questionnaire.

**2. Response Style Indicators** - This section describes two scales that provide information about how the Participant responded to the questionnaire.

**3.** The Resilience Profile - This section provides you with details about the Participant's profile in relation to all eight components of resilience.

**4. Interpretation and Interview Guide** - This section provides a description of the Participant's scores and a set of interview questions to explore his or her profile on The Resilience Questionnaire.

# 1 The Eight Components of Resilience

Resilience is not a single construct. It comprises of a variety of different components which everyone possesses to a greater or lesser degree. Therefore when we talk about someone being 'resilient', we are actually referring to someone who has a relatively high level of each of these components. A resilient individual may also be very high on certain components, and lower on others.

There are eight core components to resilience. These are detailed below:

	Self Belief	The extent to which an individual has confidence in their ability to address problems and obstacles that they encounter
	Optimism	The extent to which an individual believes that they will experience good outcomes in life, and the way in which they explain setbacks that they experience
	Purposeful Direction	The extent to which an individual has clear goals that they are committed to achieving
₽	Adaptability	The extent to which an individual is willing to adapt their behaviour and approach in response to changing circumstances
$\mathbf{Q}$	Ingenuity	The extent to which an individual perceives they are capable of finding solutions to problems that they encounter
57	Challenge Orientation	The extent to which an individual enjoys experiences which challenge them, and perceives stretching situations as opportunities to learn and develop
$\Omega$	Emotion Regulation	The extent to which an individual is able to remain calm and in control of their emotions in stressful situations
2	Support Seeking	The extent to which an individual is willing to ask others for help and support when dealing with difficult situations

# 2 Response Style Indicators

There are two response style indicators that provide information about how the Participant responded to the questionnaire. These are detailed below:

**1. Social Desirability** - The tendency for a Participant to put forward a positive impression of themselves whilst responding to the questionnaire. If scores on this scale are high, then caution may need to be exercised when interpreting the other scales in the questionnaire.

**2.** Rating Range - The tendency for a Participant to use the full range of the rating scale when responding to the questionnaire. At the extreme high end, the full extent of the rating scale has been used, including frequent use of either end of the rating scale. At the extreme low end, a very narrow range of rating points has been used and the extremes have been avoided.

### Social Desirability

#### Low Scores

Tends to be self-critical and unconcerned about presenting themselves in a positive light

#### **High Scores**

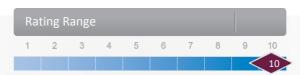

Likely to be very focused on presenting themselves positively, which could distort profile

The Participant's score on this scale was **well below average**. People with scores in this range are much less likely to be concerned about managing their impressions and they can be very candid or self-critical in their responses. This should be kept in mind when interpreting the he Participant's profile.

### Rating Range

#### Low Scores

Used a narrow range of responses on the rating scale and profile may lack differentiation

#### **High Scores**

Used a wide range of responses on the rating scale, with regular use of extreme rating points

The Participant's score on this scale was **well above average**. People with scores in this range use a very wide spread of points on the rating scale, including very frequent use of extreme ratings. This may result in the Participant having a profile which is highly varied, with some very high scores on certain scales and some very low scores.

# 3 Resilience Profile for Ann Example

This section provides an overview of the Participant's resilience profile in relation to a comparison group based on the responses provided in the questionnaire. Results are shown on a 1 to 10 scale. Scores between 4 and 7 are in the average range in relation to the comparison group. Scores of greater than 7 are above average, and scores of less than 4 are below average.

# 4 Interpretation and Interview Guide

This section provides questions that can be asked during an interview, based on the responses given by Ann Example to The Resilience Questionnaire. The purpose of the interview is to verify the Participant's profile on the questionnaire. Therefore, the questions in this section have been generated depending on the scores obtained by Ann Example on each of the eight scales in the questionnaire, relative to the comparison group. Different follow-up interview questions will be shown according to whether the Participant's score was low, medium or high on a given scale relative to other respondents.

The questions are intended to provide a starting point for the interview and are **not** intended to be exhaustive. Assessors should ask additional questions based on the Participant's responses and specific areas relevant to the job role for which the Participant is being considered.

The Assessor should decide which scales are priorities to explore in the interview. Typically the Assessor should spend most time exploring low scores, as these are likely to represent the greatest concern in terms of an individual's resilience. However, the scales that Assessors focus on should be determined by the requirements of the job role, and this may mean that specific scales require particular exploration if moderate or high scores are achieved.

The scores for each of the resilience components, called Sten scores, range from 1 through to 10. A guide to how these scores can be interpreted is provided below.

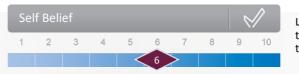

For each of the resilience components, the Sten score is presented along with an interpretation of what that score means and three interview question prompts. A space to record any notes on the Participant's responses in the interview is also provided, along with a table showing positive and negative behavioural indicators for the resilience component.

A rating scale is provided to rate the Participant's capability in relation to that resilience component if you wish to use. This rating should be based on the Participant's score along with the behavioural evidence you collect in the interview. At the end of the questionnaire, you also have the opportunity to provide an overall rating based on your overall perceptions from the Participant's scores and the behavioural evidence collected during the interview. These ratings should be based on the Participant's profile in combination with the requirements of the job role.

# Self Belief

#### Low Scores

Likely to believe that they do not have the ability to cope with unexpected situations

#### High Scores

Likely to have confidence that they can deal with any situation that they find themselves in

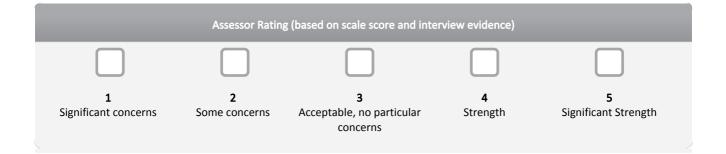

The Participant's score on this scale was **average**. People with scores in this range will have some confidence in their own abilities, although at times they may doubt their abilities when it comes to difficult or challenging issues.

### **Interview Questions**

- How well do you feel you generally cope with very challenging situations? How often do you face these sorts of situations?
- Are there certain types of challenging situations that you feel more comfortable dealing with? Why is this? Describe a recent example.
- What types of challenging situations do you feel less comfortable with? What is it about these situations which make you less comfortable? How well do you think you have dealt with these situations in the past?

### Assessor Evaluation: Self Belief

Positive Behavioural Indicators	Negative Behavioural Indicators
Demonstrates confidence in own ability to carry out a task or job.	Can doubt their capability to perform at work.
Is confident that they can cope with major problems and crises.	Uncertain whether they are not capable of dealing with major problems and crises.
Believes they can achieve whatever they set their mind to.	Has limiting beliefs about what they can achieve.
Not easily deterred by difficulties or setbacks.	Can be disheartened when things don't do to plan.
Is self-assured in uncertain situations.	Is indecisive when faced with uncertain situations.

#### Low Scores

Likely to have a generally pessimistic outlook, sees the negative in situations and expects things to go wrong

Optimism									<u></u>
1	2	3	4	5	6	7	8	9	10
							<	9	

#### High Scores

Likely to have a positive view of life and situations that they find themselves in, believing things will work out well in the end

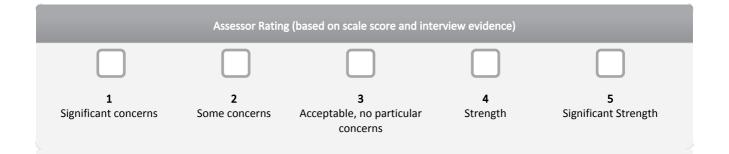

The Participant's score on this scale was **well above average**. People with scores in this range tend to believe that things will always work out for the best, even in the most difficult circumstances. They tend to see the positives in any situation and focus on these.

### **Interview Questions**

- Describe a time when being optimistic helped you get through a particularly difficult situation? How did your optimism help? Did things work out as well as you expected in the end?
- Tell me about a situation when you felt much more positive about a challenging problem than others did. Why was this? What did you do to encourage others to be more positive?
- At times, are you too optimistic about certain events? What impact has this had? Has this ever led you to take unnecessary risks?

# Assessor Evaluation: Optimism

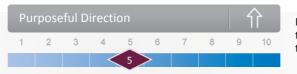

Positive Behavioural Indicators	Negative Behavioural Indicators
Stays positive in the face of setbacks and failure.	Tends to dwell on the things that go wrong.
Believes things will always work out in the end.	Expects things to go wrong, assuming worst case scenario will occur.
Concentrates on the positive side to situations.	Focuses on the negative aspects of a situation.
Encourages others to think positively.	Makes other people feel negative about what might happen.
Compartmentalises difficulties and does not let them affect other aspects of their work.	Allows difficulties in one area to affect other aspects of their work.

# **Purposeful Direction**

#### Low Scores

Likely to operate without clear goals or targets, or may be less focused on goals than others

#### High Scores

Likely to set themselves goals and targets that they are committed to achieving

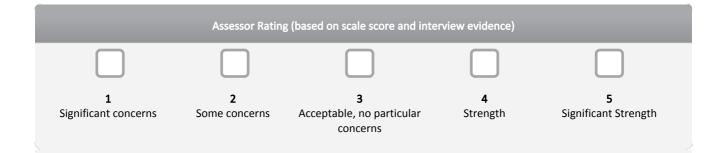

The Participant's score on this scale was **average**. People with scores in this range tend to have some goals that they work towards. They tend to be fairly committed to achieving them, but at times may be deflected from them by obstacles or other priorities.

#### **Interview Questions**

- How often do you set specific goals for yourself at work? Describe some examples. To what extent do you stay focused on achieving these goals once you have set them?
- What goals are particularly important to you? Why is this? What goals or targets are you less concerned about?
- What long term goals do you currently have? To what extent do these goals help you to put problems into perspective?

# Assessor Evaluation: Purposeful Direction

Positive Behavioural Indicators	Negative Behavioural Indicators
Shows determination to achieve goals in demanding situations.	Blames external factors on not being able achieve goals.
Sets clear short and long term goals for themselves on a frequent basis.	Rarely sets long or short term goals and appears to lack general direction in terms of goal achievement.
Consistently strives to meet targets and objectives.	Does not push themselves to meet targets or deadlines.
Keeps focused on the end goal at all times, regardless of setbacks.	In the face of setbacks, caves into pressure and gives up on achieving the end goal.
Has a strong sense of what they want to achieve from their job and career.	Does not seem to have clear career goals that they are working towards.

# Adaptability

#### Low Scores

Likely to become frustrated or anxious when they need to change plans or approach if the situation demands it

#### **High Scores**

Likely to be happy to change plans or priorities if situations or circumstances change

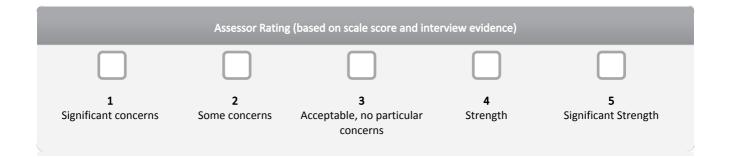

The Participant's score on this scale was **slightly above average**. People with scores in this range tend to be quite comfortable changing their behaviour when circumstances require it. They recognise when change is necessary, although they may feel less positive when there is considerable change to cope with.

### **Interview Questions**

- To what extent does your current job role require you to adapt to changing circumstances? In what ways do you have to adapt your behaviour or approach?
- Describe an example where you changed your behaviour to overcome an obstacle. What was the situation? How quickly did you change your behaviour?
- Under what circumstances do you find it most challenging to change your behaviour? When do you find it easiest to adapt your behaviour? Describe some specific examples.

# Assessor Evaluation: Adaptability

Positive Behavioural Indicators	Negative Behavioural Indicators
Sees change as positive rather than negative or threatening.	Gets frustrated or anxious when faced with change.
Easily adapts to new situations and changes at work.	Finds it hard to deviate from the rigid structure they follow when doing things.
Adjusts thinking and approach based on new information or events.	Struggles to take new relevant information on board quickly and change tactics in response.
Can modify their own behaviour if the existing approach is not working.	Sticks rigidly to the same approach even when it appears ineffective.
Is happy to change plans and priorities if necessary.	Finds it difficult to accept when plans have to change and can become frustrated.

# Ingenuity

#### Low Scores

Tends to find it difficult to identify solutions to problems, may come up with limited or obvious solutions

#### **High Scores**

Likely to be a creative problem solver, can find ways out of difficult situations and identify solutions

The Participant's score on this scale was **slightly above average**. People with scores in this range tend to believe they can find good solutions to most problems, unless they are particularly challenging or complex.

### **Interview Questions**

- How well do you feel you can come up with clever solutions to problems? How often do have to generate solutions to overcome problems in your workplace?
- In what situations do you find it easier to come up with a range of solutions, and in what situations do you find this harder to do? Give me some specific examples.
- Do you tend to solve problems better in group situations or as an individual? Why do you think this is?

# Assessor Evaluation: Ingenuity

Positive Behavioural Indicators	Negative Behavioural Indicators
Thinks beyond the more obvious solutions when trying to solve problems.	Tends to come up with obvious solutions only.
See opportunities and options in problem solving that others may not see.	Rarely sees opportunities within their working environment.
Generates imaginative ideas to overcome obstacles.	Ideas are conventional and lack imagination.
Shows confidence in their ability to find a way around problems.	Doubts whether they can find a way around problems without help from others.
Thinks of multiple ways around a problem.	Comes up with a limited number of solutions to solve a problem.

# **Challenge** Orientation

#### Low Scores

Tends to stay in own 'comfort zone', does not actively seek out or enjoy challenging situations

Challenge Orientation									7
1	2	3	4	5	6	7	8	9	10
							<	9	$\succ$

#### High Scores

Likely to seek out challenging experiences, seeing them as an opportunity to learn and improve

The Participant's score on this scale was **well above average**. People with scores in this range tend to see problems and difficulties as interesting challenges to be overcome. They relish very difficult challenges and constantly seek them out, seeing these situations as opportunities to learn and develop.

#### **Interview Questions**

- Tell me about a time when you proactively sought out a new challenge. What led you to do this? How did you respond to this challenge and what were the outcomes?
- What is the most difficult challenge you have ever faced? How well did you feel you coped with this? What did you learn and how did you develop from this experience?
- How do you cope with tasks that are more mundane? How do you motivate yourself to complete these tasks?

# Assessor Evaluation: Challenge Orientation

Positive Behavioural Indicators	Negative Behavioural Indicators
Does not shy away from difficult tasks, instead viewing them as challenges to be overcome.	May go out of their way to avoid situations that are unfamiliar or uncomfortable to them.
Actively seeks out tasks they regard as challenging.	Tends to volunteer only for situations and tasks that can be easily resolved.
View challenges as opportunities to learn and develop.	Does not recognise that challenges provide a good opportunity to learn and develop.
Enjoys dealing with new problems they have never come across before.	Prefer to remain in their comfort zone and deal with problems they are familiar with.
Sees difficult situations as an opportunity to test themselves.	Overly concerned about the possibility of failure.

 Significant Strength

# **Emotion Regulation**

#### Low Scores

Tends to find difficult situations stressful and may find it hard to control own emotions

#### High Scores

Tends to stay calm even in the most difficult situations, appears emotionally controlled

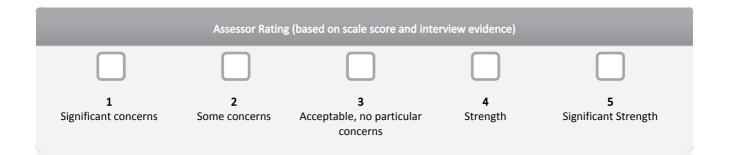

The Participant's score on this scale was **slightly below average**. People with scores in this range are generally able to control their emotions in difficult or stressful situations fairly well. However in certain circumstances they may become anxious or flustered.

#### **Interview Questions**

- Generally, how well do you feel you keep control of your emotions when faced with stressful and demanding situations? How often do you have to deal with these kinds of situations?
- Under what circumstances do you find it most difficult to stay calm at work? Why do you think this is?
- In what situations do you find it easier to keep calm, even when things are stressful? What strategies do you use in order to do this?

# Assessor Evaluation: Emotion Regulation

Positive Behavioural Indicators	Negative Behavioural Indicators
Maintains focus on the main objectives even when under with significant pressure.	Can get lost in minor details or issues and lose sight of the main objectives of the task.
Maintains composure when faced with difficult or unexpected problems.	Can get flustered when things are going wrong.
Exhibits a calm and controlled manner in the face of difficult or stressful situations.	Can become anxious and annoyed when things are not going right.
Keeps events in perspective and does not overreact in high pressure situations.	Gets caught up in their emotions and overreacts in high pressure situations.
Thinks clearly and makes rational and effective decisions under pressure.	Tends to make irrational or poor decisions under pressure.

# Support Seeking

#### Low Scores

Likely to be reluctant to talk to others about problems and prefer to work through issues alone

Support Seeking								8	24
1	2	3	4	5	6	7	8	9	10
								<	10

#### High Scores

Likely to be comfortable talking to others about issues and asking others for support with difficulties

The Participant's score on this scale was **well above average**. People with scores in this range tend to see themselves as having a very strong support network. They are always willing to ask people for help when they need it and do not feel they need to tackle problems alone.

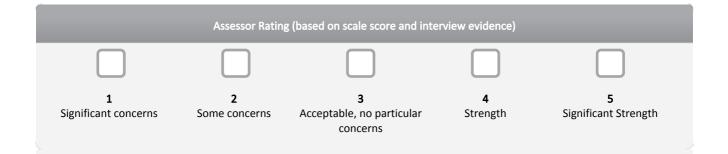

#### Interview Questions

• How easy do you find it to ask for help or support at work? Is this something you do regularly?

- Describe an example when you have asked a colleague for help with a difficult task that was your responsibility. What was the situation and what extra assistance do you feel like your colleague provided over and above what you could have achieved alone?
- How do you feel if you have to tackle a problem alone without any help from others? Why do you think you feel this way? What has happened in the past when you have tried to tackle problems alone?

# Assessor Evaluation: Support Seeking

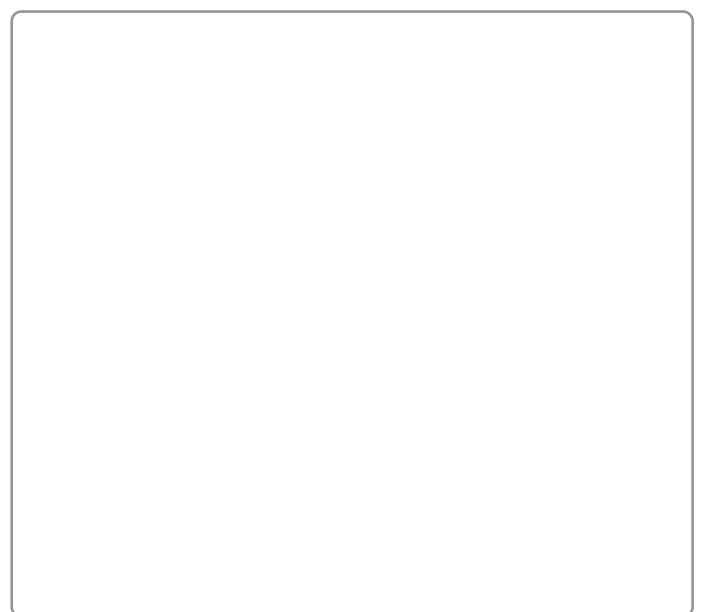

Positive Behavioural Indicators	Negative Behavioural Indicators
Prefers to ask for help and does not feel like they need to tackle problems alone.	Tries to overcome obstacles alone, when it would be better to seek guidance from others.
Regularly shares their concerns and feelings with people at work who they know well.	Avoids sharing concerns and feelings with others as they don't want to be a burden.
Has a good support network who they can draw on for support with different issues.	Has a limited support network which they can draw on when facing difficulties.
Recognises the appropriate time to ask others for help.	Persists with trying to solve problems on their own.
Is open to others' offering help and support.	Refuses offers from others to help.
